

PET FOOD DISPENSERS AND METHODS OF DISPENSING PET FOOD

ABSTRACT OF THE DISCLOSURE

[0088] The subject invention provides pet food dispensers. Embodiments of the subject pet food dispensers include a housing and a resealable opening therein. The housing is configured for retaining and controllably dispensing a selected amount of flowable pet food through the resealable opening. Also provided is packaged pet food. Embodiments of the packaged pet food include a subject pet food dispenser and ambient temperature stable flowable pet food retained therein. In certain embodiments, the subject dispensers are pre-filled with multiple servings of pet food, e.g., multiple servings of ambient temperature stable flowable pet food.

[0089] Also provided are methods of retaining and dispensing flowable pet food. Embodiments of the subject methods include applying light to moderate pressure to the exterior of a pet food dispenser having flowable pet food retained therein to controllably dispense a selected amount of said pet food from a resealable opening of said pet food dispenser.
